

Collaboration Notes

1. Tools Used for Independent Work:

- **Microsoft Word:** For documenting technical plan of frontend requirements, workflow, API integration market research and competitor analysis.
- **Lucidchart:** To create workflows and relationships.
- **VS Code:** To design and validate the sanity schema.

2. Simulated Collaboration:

- While working independently, workflows and schemas were designed with clear documentation to ensure future team members can easily integrate their contributions.
- Each schema and process was validated to avoid ambiguities.

3. Self-Validation Process:

- Cross-referenced schemas with best practices for sanity modeling.
- Verified technical plans against industry standards to ensure scalability.

4. Future Collaboration Readiness:

- All documentation and schemas are structured and stored in a collaborative format, enabling easy sharing and modifications by future collaborators.
